General Educational Development Test (GED)

by **Feras Alzubi**

BOOK DESCRIPTION

What this book teaches. The complete preparation for all four GED subject tests — Mathematical Reasoning, Reasoning Through Language Arts, Science, and Social Studies — taught whole, from zero, in one book. The GED test is four separate exams, each scored on its own 100–200 scale, and the passing score is 145 in each subject — there is no average to hide behind, so this book runs four complete campaigns, one per subject, each with its own diagnostic, chapters, quizzes, and two full practice tests. The 38 chapters run in five parts: two opening chapters on the credential itself and the study system (diagnostics, trackers, and the three common crafts — close reading, data and graphics, careful computation); then one complete course per subject — Mathematical Reasoning (numbers from zero through ratios and percents, geometry, data and probability, algebra, quadratics and functions, graphs and the calculator workshop); Reasoning Through Language Arts (reading from zero, reading for meaning, arguments and evidence, real documents, the two language chapters, and

the Extended Response Workshop); Science (how an investigation works, reasoning in science, life science from cells to ecosystems, physical science, Earth and space science); Social Studies (reading sources like evidence, civics, United States history, economics, geography, and numbers and graphs in social studies). Two closing chapters cover the test itself — scheduling, test day, scores, and retakes — and your four-subject campaign. Every term is defined at first use; every subject opens at zero and assumes nothing. The published format, as GED Testing Service publishes it: Mathematical Reasoning, 115 minutes in 2 parts; Reasoning Through Language Arts, 150 minutes in 3 sections, including 45 minutes for the written essay; Science, 90 minutes; Social Studies, 70 minutes. This book prepares you for one credential only — the GED test. It is not a book for the HiSET examination, a different equivalency test used in some states. It is not a diploma or a school: the credential is awarded by your jurisdiction on the basis of your four passing scores. There is no national price for the GED test — the price varies by state — so this book prints none and tells you to check your state's page on GED.com before you schedule. And no diagnostic or practice score in this book is ever converted into a prediction about the real test: what your practice results give you is a map of what you know and what you do not know yet. Who it is for. Candidates preparing for the GED

test — whether you left school years ago and need all four subjects taught from the very beginning, or you already know some of the material and need the complete exam apparatus for the subjects you still have to pass. Each subject part stands on its own, so you can work the subjects in the order you plan to sit them.
